

Rugged Mobility Solutions

SOLUTIONS OVERVIEW

Rugged Tablets, Handhelds & Scanners — Built For Enterprise

When a standard device isn't tough enough for your operation, you need hardware built for the environment — not workflows forced to adapt to it. Whether your team is in a warehouse, distribution center, manufacturing plant, transportation operation, or the field, JLT Plus helps you select the right combination of performance, durability, connectivity, and functionality.

Find The Right **Rugged Device** For Your Application

Windows Rugged Tablets

For organizations that need desktop-class applications, enterprise security, and compatibility with existing Windows environments — enterprise apps, ERP/WMS/TMS access, and legacy software.

Android Rugged Tablets

For mobile-first workflows that prioritize ease of use, flexibility, and application mobility — inventory, inspections, data collection, order management, and asset tracking.

Industrial Panel PCs

For reliable, space-efficient computing in demanding operations, including cold and dry storage use in warehouses and industrial facilities. Easy-to-integrate touchscreen computing that helps operators access critical applications, manage workflows, and keep operations running efficiently.

Rugged Mobility Solutions

Rugged Handheld Computers & Barcode Scanners

Your operation moves at the speed of your data. From receiving and put-away through picking, shipping, inventory management, and field service, workers need mobile handheld devices and barcode scanners that capture information quickly, minimize downtime, maintain reliability, and sustain productivity.

Industrial Panel PCs Built for Industrial Control & Automation

Industrial panel PCs combine powerful computing and touchscreen control in a durable, all-in-one platform built for demanding environments. Ideal for industrial automation, machine control, and real-time monitoring. Help operators run critical applications, access live data, and manage processes efficiently across manufacturing, processing, fabrication, and cold and dry storage operations.

More Than a Device. The **Right Solution.**

Choosing a rugged tablet, handheld, or scanner isn't just about screen size or processor speed. We help you evaluate the complete solution before you buy.

What it Determines	
Application	What software and workflows will the device run?
Environment	Indoor, outdoor, cold storage, manufacturing, dust, moisture, or vibration?
Operating System	Windows or Android — which fits your existing stack?
Data Capture	Do you need an integrated barcode scanner, camera, RFID, or other capture technology?
Connectivity	Wi-Fi, cellular, Bluetooth, GPS, or specialized connectivity?
Ergonomics	Will workers carry it, mount it, wear it, or use it in a vehicle?
Accessories	Docks, keyboards, vehicle mounts, handles, batteries, and chargers.
Lifecycle	What are your deployment, management, support, and replacement requirements?
Support	How are you planning on supporting your devices? Do you have anything like an MDM in place today?

Multiple Brands. One Source.

Compare leading rugged computing brands without managing multiple vendors.

Rugged Mobility Expertise

Experience spanning industrial computing, warehousing, logistics, transportation, and demanding environments.

The Right Device — Not Just the Most Expensive One

Our goal is to match performance and durability to your actual requirements.

Application-Driven Recommendations

We start with your workflow and environment, then identify the devices that fit.

Complete Solutions

Accessories, peripherals, deployment support, and the broader mobile computing environment — not just the device.

Help Before and After the Sale

From product selection to deployment, we're here to help the investment work.
